Configuración de perfiles de APN y asignación de Slot

Ricardo Cuevas Alvarado

ricardo.cuevas@wamtech.com

En este script, serán explicados los pasos para configurar los perfiles de APN asignándolos a un Slot determinado, con el fin de que si falla la conexión de la principal, el equipo intente comunicarse por medio de la secundaria.

Aquí pueden quedar guardados 4 perfiles, lo que permite tener distintos APN para un Slot dando prioridad a la que se encuentre puesta en el Digi, para fines prácticos, resulta útil para no estar configurando el APN cada vez que se cambie la SIMCARD.

Mobile Profiles
