

# HACER PING A TRAVES DE UN DIGI

wamtech  
Wireless & Mobile Technologies

En el caso de que no se tenga conexión con el dispositivo conectado, se puede utilizar la herramienta de diagnóstico proporcionada por el dispositivo Digi, para lo cual sólo basta con ingresar desde Internet a “**System Information**”, “**Diagnostic**” e ingresar la dirección IP del dispositivo que se desea revisar, luego presione “**Ping**” y deberá obtener “**0% packet loss**”, de lo contrario repita los pasos de este documento desde el comienzo y revise las conexiones realizadas.

**System Information**

- ▶ General
- ▶ Serial
- ▶ Network
- ▶ Mobile
- ▶ IP Network Failover
- ▶ iDigi
- ▶ Position
- ▼ **Diagnostics**

To help determine whether this device is able to access remote devices over the network, use the ping utility below to ping the IP address of a device in order to communicate with it.

Hostname:

**Ingresar dirección IP del dispositivo TCP/IP**

Para 0% de paquetes perdidos, sería así:

The screenshot shows a web interface for a network device. On the left is a navigation menu with categories: Home, Configuration (Network, Mobile, Serial Ports, Camera, Alarms, System, iDigi, Users, Position), Applications (Python, RealPort), Management (Serial Ports, Connections, Event Logging, Network Services), Administration (File Management, X.509 Certificate/Key Management, Backup/Restore, Update Firmware, Factory Default Settings, System Information, Reboot), and Logout. The main content area is titled 'System Information' and has a 'Diagnostics' section expanded. It contains a text box with the following text:

```
PING 192.168.1.5: 64 data bytes
64 bytes from 192.168.1.5: icmp_seq=0 time=9 ms
64 bytes from 192.168.1.5: icmp_seq=1 time=2 ms
64 bytes from 192.168.1.5: icmp_seq=2 time=4 ms

--- 192.168.1.5 ping statistics ---
3 packets transmitted, 3 received, 0% packet loss
round-trip min/avg/max = 2/5/9 ms
```

The '0% packet loss' in the statistics line is circled in red.
